Static random-access memory (static RAM or SRAM) is a type of semiconductor memory that uses bistable latching circuitry (flip-flop) to store each bit. SRAM exhibits data remanence, but it is still volatile in the conventional sense that data is eventually lost when the memory is not powered. The term static differentiates SRAM from DRAM (dynamic random-access memory) which must be ...

Take control and power-up â€“ With boot-up times faster than 1ms, the MachXO2 can rapidly take control of signals during power-up for increased system performance and reliable operation. Increase system performance, logically â€“ With in-built hardware acceleration and up to 6864 LUT4s, the MachXO2 enables you to reduce processor workload and increase system performance.
